

CURRICULUM-BASED MEASUREMENT OF READING

ALISON MADELAINE AND KEVIN WHELDALL

STATEMENT OF THE PROBLEM

Most reading tests are insensitive to small changes in reading progress and should not be used too frequently because of practice effects. Educators need to monitor the reading progress of low-progress readers on a very regular basis, however, in order to make instructional decisions well before the conclusion of a program or the end of a school year.

PROPOSED SOLUTION/ INTERVENTION

Curriculum-based measurement (CBM) is a method of assessing growth in basic skill areas. One skill area where this has been widely employed is that of reading. Several curriculum-based measures of reading exist, but perhaps the most widely used is oral reading fluency (ORF). ORF is measured by a passage reading test, which requires students to read aloud from a passage of text for 1 minute, to determine the number of words read correctly per minute.

THE THEORETICAL RATIONALE – HOW DOES IT WORK?

An essential feature of this assessment method is that test materials are drawn from the students' curriculum, sometimes taken directly from a basal reading series, and sometimes consisting of a set of generic passages that represent the students' curriculum. By reading a passage of text, the whole skill of reading is measured, rather than component sub-skills. Low-progress readers are closely monitored on, say, a weekly basis, using a set of curriculum-based passage reading tests. This

information is then used to make instructional decisions such as increasing the intensity or frequency of instruction.

WHAT DOES THE RESEARCH SAY? WHAT IS THE EVIDENCE FOR ITS EFFICACY?

Research on CBM of reading dates back to the early 1980s, and continues to the present day. As such, CBM of reading has a large and very sound research base. Many studies have provided evidence of the reliability and validity of CBM of reading. ORF has been found to be a valid indicator of general reading ability *including* reading comprehension. Research has also demonstrated that CBM of reading is an effective means of monitoring reading progress, particularly that of low-progress readers.

CONCLUSIONS

CBM is a quick, reliable, valid and cost effective method of tracking progress in reading. It provides valuable information which enables educators to monitor progress regularly and to make appropriate instructional decisions in order to maximize the reading progress of their students.
